

Achieve More Rapid Mussel Detection with the Prefix C.L.E.A.N. Zebra / Quagga Mussel Sampler Patent Pending

Description:

- High Calcium Carbonate Content – calcium carbonate has been found to attract Zebra and Quagga mussels and exists in high quantities naturally in mussel shells¹
- Dark Color (compared to the traditional sampler) - Mussels are known to gravitate toward darker colored substrates possibly due to their avoidance of light & desire for warmer conditions²
- High pH - Mussel attraction is the highest when pH levels are 8.0 or greater³; the Prefix C.L.E.A.N. samplers have been designed with a pH ranging between 12-14
- Free from PVC Chemicals - PVC has been known to release chemicals upon being deployed into the water that actually repel aquatic species. By eliminating these chemicals, Prefix C.L.E.A.N. samplers allow for faster results

Traditional PVC Sampler

Prefix C.L.E.A.N. Sampler - Pat. Pend.
